## FERRAGAMO EYEWEAR COLLECTION AUTUMN-WINTER 2025

The new Ferragamo Eyewear collection balances style and functionality with effortless sophistication. Tradition and contemporaneity meet in enveloping shapes and fluid, lightweight constructions, crafted from exclusive materials that blend artisanal elegance with technical innovation.

The iconic Gancini motif evolves into precious new interpretations inspired by leather accessories, boldly reimaged as an interlocking chain on the Acetate Renew frames.

The prismatic plaque—a detail derived from bag closures—extends from the front to the temples on new men’s styles, adding a distinctive note that integrates seamlessly into the temples. Milled by hand and engraved with the Ferragamo logo, this linear-grooved element defines both timeless sunglasses and optical frames, the latter also available in transparent hues that reveal the inner metal core.

### SF2082SE

These women’s sunglasses merge iconic aesthetics with responsible design in thick, oval profiles made from Acetate Renew— a blend of bioplastic derived from sustainably sourced wood pulp and recycled content sourced from industrial processes. The design is elevated with the new Gancini detail: the House emblem is doubled and integrated into the hinges as a bold metal chain. The look is finished with bio-based lenses made from plant materials derived from repurposed wood and agricultural waste.

## SF2087S

Mixing vintage inspiration with contemporary flair, these sunglasses feature a thick, enveloping construction with a linear profile and a pronounced bridge. The acetate frame is characterized by a prismatic metal insert that runs from the front to the temples, highlighting a warm, natural palette. This functional and aesthetic detail, with its raised plaque engraved with the Ferragamo logo, is enhanced by linear grooves from a precision milling process that adds a dynamic edge. Classic black and tortoiseshell versions are flanked by pop colourways, like blue lenses on dark brown and ochre lenses on khaki.

## SF3041E

This women's optical frame is distinguished by its thick, squared shape with faceted finishes on the front. It is made from Acetate Renew— a blend of bioplastic derived from sustainably sourced wood pulp and recycled content sourced from industrial processes.

Inspired by Ferragamo handbags and leather goods, the new Gancini detail is crafted as a bold yet refined interlocking metal chain. The seasonal colour palette transitions from timeless black to beige, and warm, deep hues of burgundy and caramel.

## SF3044

This optical frame stands out with the confident elegance of its squared, linear shape in thick acetate. The style is adorned with the distinctive prismatic metal plaque, extended from the front to the temples and embellished with a refined pattern of linear grooves achieved through a high-precision milling process. The raised plaque, engraved with the Ferragamo logo, acts both as a decorative element and a structural link to the temples, creating a sharp graphic and chromatic contrast – especially in the transparent style with a visible inner metal wire core.
